RESET XPDR'S DCD CONCORDE COLD & DARK QUICK START GUIDE
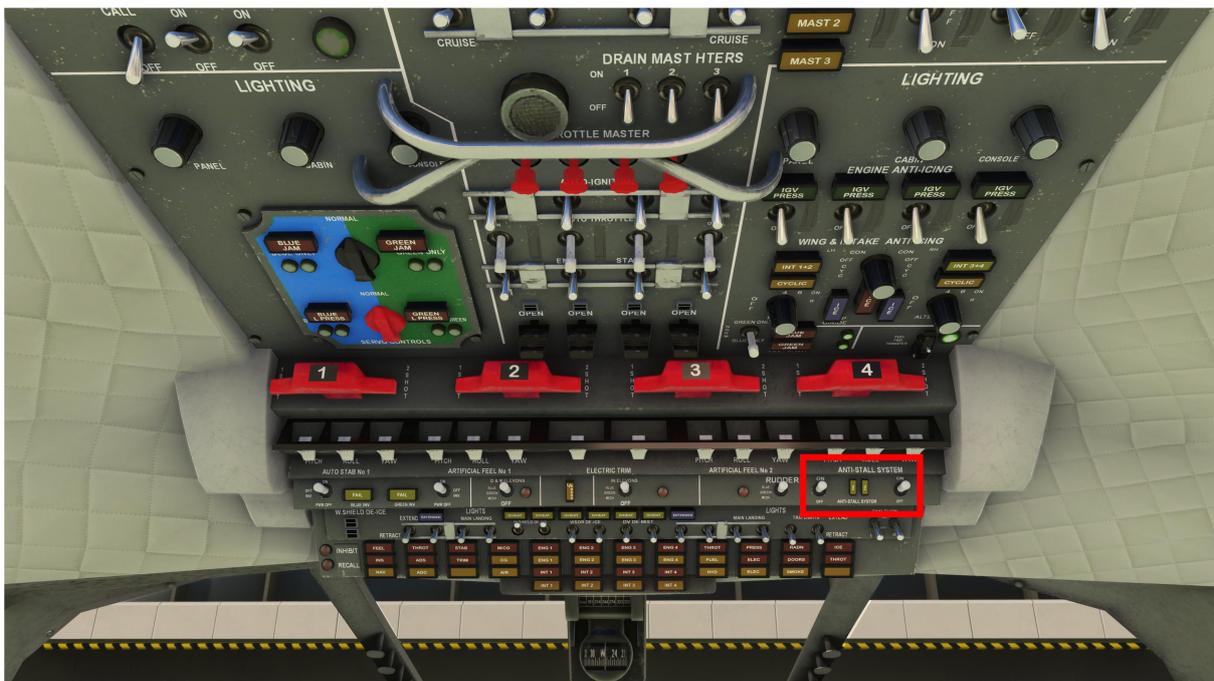

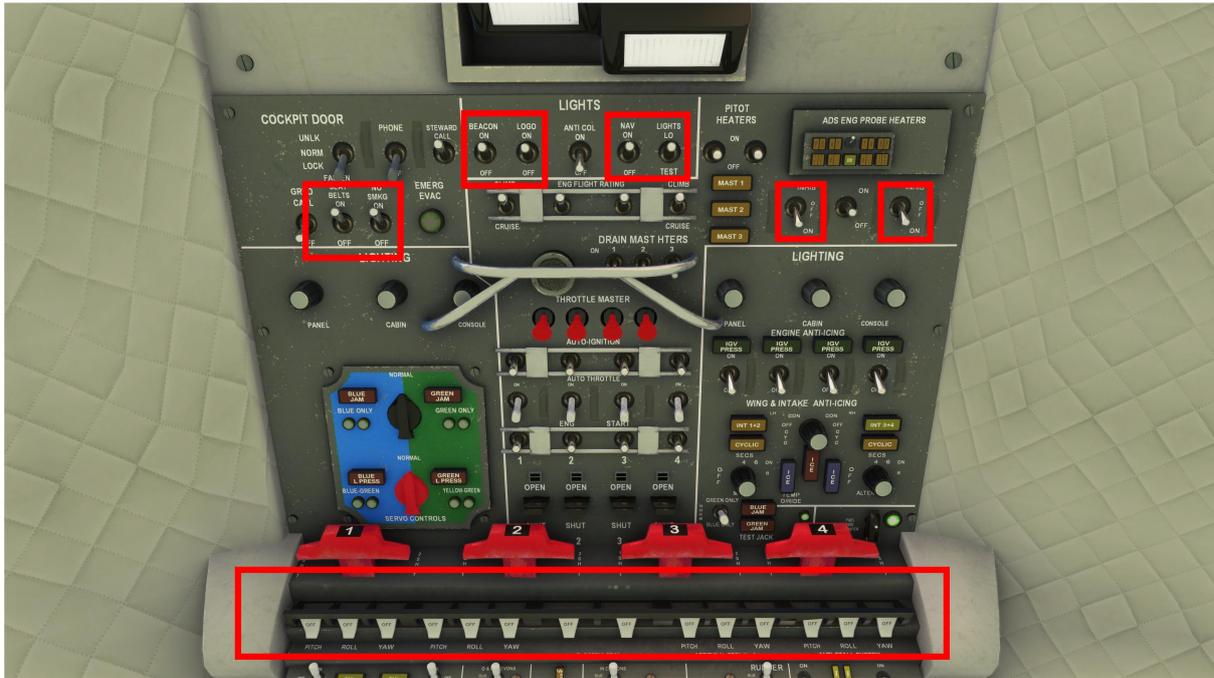

First, hit CTRL-E to get your virtual flight engineer to put power on and start the engines while you do everything else.

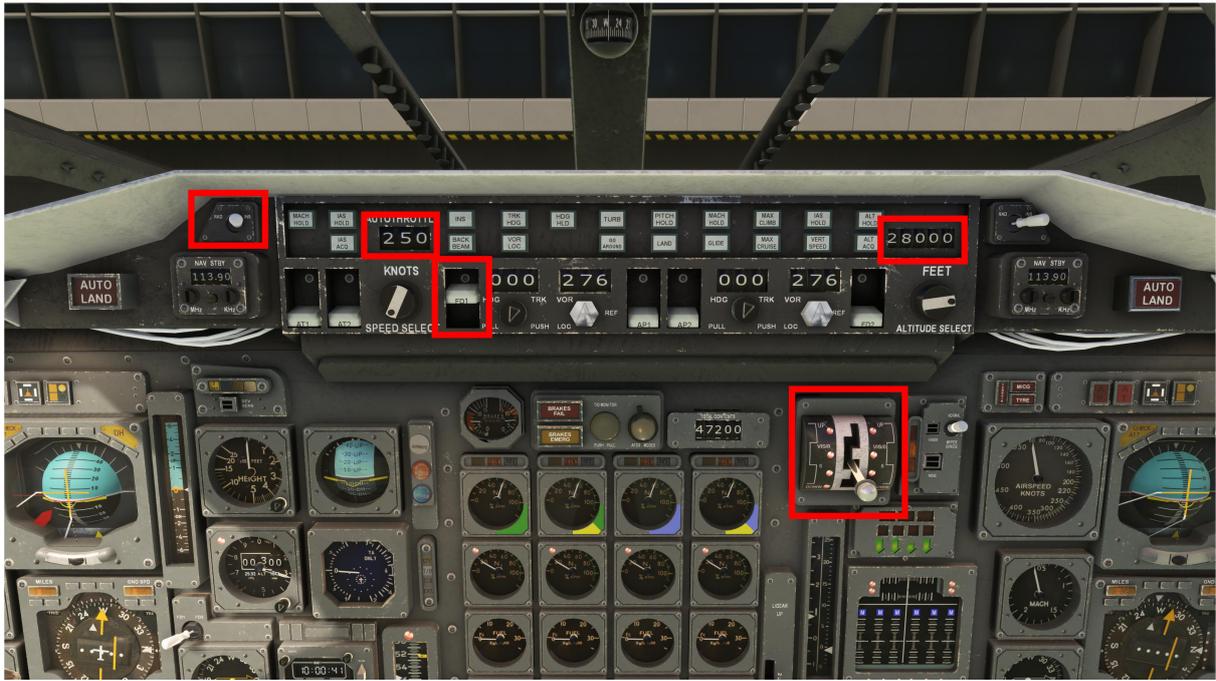

30 seconds after hitting CTRL-E:

Starting at the overhead panel, set the following switches to on:

Autopilot panel and nose position selector:

Set your trim to around 5:

Set your fuel and fuel balance per your fuel calculations:

By the time you've done all that, engines are started and you are ready to taxi!
